DETAILED ACTION

Information Disclosure Statement

The information disclosure statements (IDS) submitted on 12/22/2003 and 1/13/2005 are in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 41-52 are rejected under 35 U.S.C. 102(b) as being anticipated by Klein et al. (5,762,631). Klein discloses a catheter body (10) with a distal, proximal, and tubular body that is made up of two main structural elements shown in Figure 1. The inner member (12) and outer member (14) that are treated by an extrusion process to add ridges (20) to the surface which increases the initial surface area of the catheter tubular member. The inner member has an outer surface and inner surface and lumen as seen in Figure 1. Klein discloses that the catheter structural elements can be composed a variety of synthetic polymers such as silicone, polyethylene and/or polyvinylchloride (col 7, ln 17-21). Klein discloses an inner member connected to the outer member is depicted in the embodiment shown in Figure 5 with multiple lumens present.

Page 3

Claim 53 is rejected under 35 U.S.C. 102(b) as being anticipated by Parisi et al. (US2001/0027310). Parisi et al. discloses a catheter consisting of a distal, proximal, and lumen regions (Figure 1). A structural member is treated by laser ablation to groove out the polymer around tubular inserts ([010]) increasing the surface area of the tubular construct. The tubes are then treated and locked via heat shrinking and are locked due to the friction between the surfaces providing a mechanical force to hold the two tubular members together ([0032]).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Koshiba et al., Berg et al., Kaufman et al., and Ohara et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher D. Koharski whose telephone number is 571-272-7230. The examiner can normally be reached on Monday through Friday 7:30am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nicholas Lucchesi can be reached on 571-272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Application/Control Number: 10/667,909

Art Unit: 3763

Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
